

"Change is everywhere we look.
Gone are the days when the bathroom was a place for pure functionality; it has become a room and a space that has been transformed. Now it is more inclined to provide a haven from hectic lifestyles, a place for wellness or to experience the latest in bathing technology. Every time we design new ranges for the bathroom, our aim is to provide that perfect balance between style, performance, innovation and sheer indulgence "

Paul Illingworth - Abode Designer

The Abode ranges of bathroom brassware and showering solutions are created for people who want the perfect blend of design, performance and sheer quality in their homes without an enormous price tag. All Abode products are lovingly hand finished, assembled and tested in our factories prior to the journey to the centre of your bathroom and daily life.

DISTINCTLY ABODE

Here's the story behind the name:-

Established in 2002 we are a UK based company who design and engineer innovative bathroom and kitchen products.

We now manufacture well over half a million products a year, all specifically designed for the UK market.

We work very closely with our network of manufacturing partners to deliver high quality, design leading products, all of which we aim to achieve without the big price tag.

In all our products, we invest in the very best parts and components and are so confident in the quality of our products that they carry a comprehensive five year warranty.

Design innovation is in our blood here at Abode and we are honoured to have had our work recognised through numerous industry awards.

Our thirst for innovation, design, quality and service continues to remain as strong as it did at our company birth so why not come in and take a look, you'll be pleasantly surprised that beautiful and well manufactured products need not break the bank.

FUNKTIONALITY ASSURED

All Abode products use the finest components, from silky smooth valve cartridges to our anti splash aerators at the end of the spout – all are designed to improve the experience of using our brassware. These small things might not be immediately noticeable but add up, collectively to make a good design, great.

VALVE CARTRIDGES

All Abode cartridge designs are tested for over 200,000 cycles before we will pass them for use within our taps. Why? Well this means that under normal use conditions your tap valves have proven that they will work for many years to come.

WATER EFFICIENCY

We recognise we all have a responsibility to do our bit towards water saving, so we give you the choice to decide what's best for you. All our products can be either installed with flow restriction valves, therefore regulating the flow to a maximum of 6, 8 or 12 litres per minute or you could choose to opt for a flow restriction aerator which will regulate up to 3.8 litres per minute... the choice is yours.

FINISHING QUALITY

We use traditional artisan hand polishing techniques which ensure perfect blemish free surfaces and crisp edges. Our hand treatment does not end there – we even use hand plating on some ranges. Yes we know it's more expensive to do it this way, but it means that the finish is richer, the plating deeper and ultimately more durable.

LUXURY PACKAGING

After taking all this care with the product, we want to ensure they reach you in perfect condition with all the parts that you will need for a seamless and straightforward installation.

COMPREHENSIVE WARRANTY

Such is our dedication and reputation for quality, we offer a comprehensive 5 Year Warranty on all our brassware products.

Desire (di-zahyuhr) n. A longing or craving, as for something that brings satisfaction or enjoyment.

DESIRE

OBJECTS OF DESIRE Cascading flows of water are the inspiration behind the Desire range of bathroom mixers and thermostatic showers. Water introduces beautiful transparent shapes and natural patterns into your bathroom, so why hide them?

INTRODUCING TEMPEAU

The concept of tempeau was born partially from legislation changes to thermostatic bathing safety and partially from on-going conversations with the public and installers.

Thermostatic showers have long since been increasing in popularity in the UK, but when thermostatic regulations came into force there were, and still remains, very few options available.

At the heart of our product is the tempeau thermostatic valve design, which has been designed and created with the following points in mind:

- To ensure thermostatic safety is delivered to both bathing and showering experiences alike.
- To allow the user to obtain the best possible flow performance from the UK's notoriously low pressure hot water systems.
- To be significantly faster and easier to install as tempeau is connected to the underside of the bath.
- To be intrinsically simple to understand and easy to order.

THE RANGE

The result is a carefully selected combination of bathing and showering kits which have been selected by our designers to make life simpler and safer. All you have to do is choose the style of kit configuration and the design of the hand wheels. Really simple. tempeau simple!

For any bespoke combination requirements please contact us for further information.

^{*} Supplied with circular designed spout and showerhead where applicable + Supplied with square designed spout and showerhead where applicable

^{*} All Tempeau components are available as individual parts, please contact the sales office for further detail.

The Abode range of showers and accessories are designed to give you the best possible start to each day, and to help wash the strains of the day away at the end. Relax and enjoy. **SHOWERING** 197

SHOWERING FUNKTIONALITY

Searching for that ultimate showering experience, then look no further than Abode's stunning array of showering solutions.... Pure indulgence!

SHOWERHEADS

All Abode showerheads are supplied with easy to clean nozzles, making life easier, logical really,...hydrological.

As the showerhead becomes progressively blocked with limescale the flow rate will reduce, by simply rubbing the jet nozzles, calcium deposits flake away restoring showerhead performance.

RIGID RISERS

For complete flexibility and adjustability, all Abode rigid risers allow the overhead shower to adjust in height and to swivel 180°.

THERMOSTATIC SAFETY

Abode thermostatic showers are manufactured to EN1287 & EN1111 design guidelines. All thermostatic showers have an automatic anti scald shutdown mechanism as standard that will become operational if the cold water supply fails, eliminating the chance of scalding.

SHOWER HOSES

All Abode showering products where applicable utilise the latest smoothflex hose design, ensuring an anti-tangle, easy to clean, anti-fracture solution... what more could you ask for

WATER EFFICIENCY

We recognise we all have a responsibility to do our bit towards water saving, so we give you the choice to decide what's best for you. All our showers can be installed with a ½" shower head flow limiter, therefore regulating the flow to a maximum of 6 litres per minute

COMPREHENSIVE WARRANTY

Such is our dedication and reputation for quality, we offer a comprehensive 5 Year Warranty on all our brassware products.

For more details please refer to page 258

SELECTING THE SHOWER VALVE THAT'S RIGHT FOR YOU

In order to help you select the right shower valve for your needs, we have highlighted below the four main types of showering valve available with a brief explanation of their features, choose the one that suits your needs the best and then turn to the page to see what family of styles that product is available in.

All Abode concealed thermostatic shower valves are supplied with a superior brass back plate as standard providing that all important finishing touch and feel.

Once you have selected your showering valve, team it with one of our many options of fixed showerheads, sliding rails, rigid risers and other options. Alternatively to view a selection of complete showering kits please turn to page 242 for Abode's recommendations.

CONCEALED THERMOSTATIC SHOWER VALVE (| exit)

I exit concealed thermostatic shower valves provides a low pressure option if you only require to operate one outlet.

The top handle controls the water flow and the bottom handle controls the water temperature.

see pages 202-203

CONCEALED THERMOSTATIC SHOWER VALVE (2 exit)

2 exit concealed thermostatic shower valves allows for the control of 2 separate outlets.

The top handle controls the water flow via a diverter between the two outlets, the bottom handle controls the water temperature.

see pages 204-207

SHOWER CONTROL SELECTION

3 CONTROL **THERMOSTATIC SHOWER VALVE**

(2 independent exits)

The 2 independent exit 3 control thermostatic shower valves allow for the option of two independently controlled outlets, which can either be used simultaneously or separately. A low pressure alternative perfect for the addition of body jets or a handshower to sit alongside your overhead shower.

see pages 208-209

3 CONTROL **THERMOSTATIC SHOWER VALVE**

(3 exit)

The 3 exit 3 control thermostatic shower valve allows for the control of 3 separate outlets of which 2 can be operational simultaneously. A perfect solution for the addition of a handshower and bath filler to sit alongside your main overhead shower.

see pages 208-209

EXPOSED THERMOSTATIC **BAR SHOWER VALVE**

The bar shower valve is a surface mounted exposed thermostatic shower valve, which sits proud of your wall. This style of valve reduces installation time and sits perfectly with a choice of one of Abode's many sliding rail kits.

see pages 210-211

DIMENSION SPECIFICATIONS

Throughout the brochure we have added a number of key dimensions within the product information section to help you with your product selection.

Detailed below is an explanation and diagrammatical reference to each dimension key.

Should you require further details then please contact our Technical Support Team or visit our website

www.abode.eu

L = Length W = Width

FD = Fitting Depth

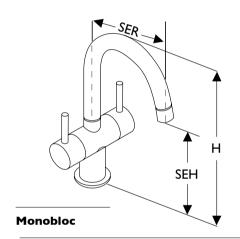

H or **P** = Height or Projection

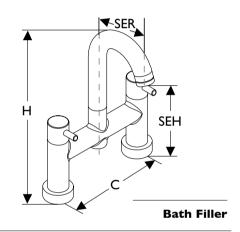

C = Centres

SER = Spout exit reach **SEH** = Spout exit height

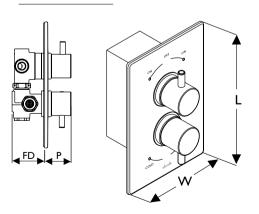

= Water efficient products as a result of inbuilt flow restricters

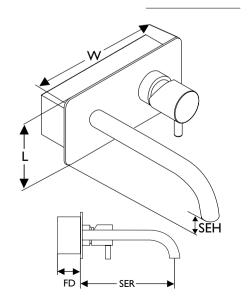

Shower Valve

WATER PRESSURE GUIDE

To ensure you achieve the best possible performance from your chosen brassware or showering product, you need to be able to identify your existing plumbing system and therefore your water pressure.

The following information provides a general overview on water pressures and a guide to ensure you choose the right product for you and your home.

If you have 'LOW WATER PRESSURE' you should take care to choose a product that is suitable, otherwise you might find that the flow rate is poor. It will be difficult to achieve a mixed temperature.

If you have 'HIGH WATER PRESSURE' you can choose any product with the same or lower pressure requirement.

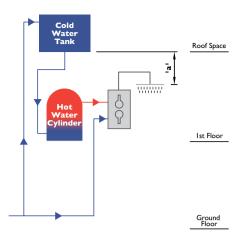

As a general guide only, when connecting multiple products you should work to the product with the highest pressure rating.

Throughout our brochure we have highlighted by each product, a simple key outlining whether the product is low pressure (LP), medium pressure (MP) or high pressure (HP) along with stating the minimum pressure required to achieve the best result. The following diagram explains the pressure required for each level.

Please note all products marked LP and MP are also suitable for HP water systems.

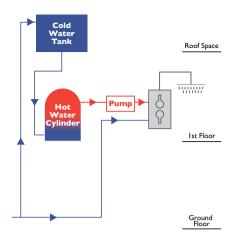

GRAVITY FED CYLINDER - VENTED SYSTEM

Most commonly found in older UK housing

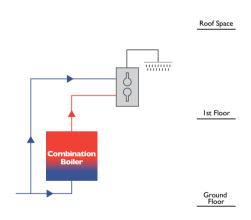

- · Hot and cold pressures are typically unbalanced (the cold water pressure is higher than the hot)
- · Cold water pressure is as per incoming mains
- · Hot water pressure (head pressure) is distance 'a' in metres divided by 10. For examples if 'a' is 1 metre then the hot water pressure is approximately 0.1 bar
- · This type of system is generally considered as low pressure

PUMPED GRAVITY FED CYLINDER - VENTED SYSTEM

Most commonly found in older UK housing that has been modernised

- · Hot and cold pressures are typically unbalanced (depending on the cold mains pressure and the rating of the hot water
- · Cold water pressure is as per incoming mains
- · Hot water pressure is as per the pump rating
- This type of system is generally considered as high pressure

Roof Space Pressure Reducing Valve (3 Bar) Cylinde 1st Floor Ground Floor

COMBINATION BOILER - UNVENTED SYSTEM

Most commonly found in newer UK houses

- · The 'combi' boiler is generally located in the kitchen
- · Hot and cold pressures are typically almost balanced (the cold water pressure may be marginally higher than the hot)
- · Cold water pressure is as per incoming mains
- · Hot water pressure is as per incoming mains but generally reduced slightly due to pressure reducing valves, filters and flow limiters
- This type of system is generally considered as medium high pressure

PRESSURISED CYLINDER - UNVENTED SYSTEM

Most commonly referred to by the brand 'megaflo'

- The cylinder(s) can be located anywhere in the house.
- · Hot and cold pressures are typically balanced (the hot and cold water pressures are equal)
- Hot and cold water pressure is typically 3 bar (as shown), otherwise the hot and cold pressure will be approximately the same as the incoming mains cold pressure
- This type of system is generally considered as high pressure

WARRANTY & CARE

WARRANTY

Comprehensive 5 Year Warranty

In the unlikely event that you should experience any defect in the materials or workmanship of your new Abode product within 5 years of purchase, the purchaser's sole remedy shall be the replacement (at the manufacturer's discretion) of all or any part of the product that is defective. All working parts, valves and decorative surface finishes are guaranteed for a period of 5 years from purchase with the exception of specialist finishes such as Matt Black and Rose Gold which are guaranteed for I year. O rings are guaranteed for I year from the date of purchase provided that our advice concerning care has been observed and no scouring agents have been used. This is provided that the product has been used for normal domestic purposes and that the care, installation and maintenance instructions have been observed. The warranty extends to the original purchaser only.

CUSTOMER CARE

Water Regulations

All products are designed in accordance with European Water Regulations and are manufactured to WRAS or other applicable European standards. All products should be installed in accordance with Local Water Bye Laws.

Technical Support

Choosing the right brassware for your home is an important choice as the product will be one of the most used in the home. Think about the style you require, the ease of use you are looking for, and then consider your existing water supply and the water pressure available to you. If you have any questions with regards to whether a product will be suitable for your application, please contact our Technical Support team or visit our website **www.abode.eu** for more details.

Your long-term satisfaction with the product is important to us. In the event that you require spare parts for your product, please contact our Technical Support team or visit our website for further technical information.

Selecting a Sink

MATERIAL

2 TYPE

3 SIZE

4 STYLE

5 FFATURES

STAINLESS STEEL: Stainless Steel is a timeless material which remains a popular choice. It is often a perfect match to the kitchen appliances so provides a coordinated finishing touch. As well as the aesthetics, it is easy to maintain and is extremely durable. All Abode sinks are constructed from premium 304 grade stainless steel and are available in an array of designs.

RESISTANCE

RESISTANT

STAINLESS STEEL

GRANITE: SiOForm® is a unique material solution engineered specially for our granite kitchen sink collection. The material is primarily made of pure and natural quartz which makes it very strong and durable, perfect for the kitchen environment. SiOForm® products have a uniform void-free structure and are resistant to temperatures up to 280°. Granite sinks also retain the water temperature in the bowl better than stainless steel. Our range consists of several unique designs in various shapes and sizes. In addition, the white, grey and black colour options offer a contemporary styled solution to create a striking focal point in the kitchen.

HYGIENIC

CLEAN

STRUCTURE NATURAL MINERAL

RESISTANT

SiOForm® is available in the following colours:

RESISTANIT

FROST WHITE

GREY METALLIC

BLACK METALLIC

BLACK

CERAMIC: Our ceramic sinks are constructed from the finest grade fireclay and are hand finished for a premium quality finish. This traditional classic is available in undermount, apron front and inset options, providing an elegant finish every time. A glazing process ensures a long lasting and durable finish.

CLEAN

RESISTANCE

DURABLE AND LONG LASTING

Sink

UNDERMOUNT: An undermount sink is installed under the worktop for a seamless, premium finish. Undermount sinks look best when installed in solid surface, granite or solid wood worktops. There are a large range of bowl sizes and configurations to choose from in this offer, providing ultimate versatility when it comes to usage requirements. The tap is often mounted on the worktop, adding to the premium, sleek look.

APRON FRONT: This range consists of our Belfast and Provincial products. They are installed under the worktop with the front face visible so require a base cabinet with a specific height to house them.

Traditionally these products are ceramic, for a more contemporary/industrial style, opt for the stainless steel Belfast.

INSET: An inset sink sits on top of the worktop and can be installed in any material, including laminate. An inset sink will often have a drainer integrated for ease and durable functionality.

The tap is usually mounted on the sink and often these designs have two tap holes so they are reversible, meaning the drainer can be positioned either left or right.

Across our comprehensive sink collection, we have several sink sizes available. In the initial planning stages, it is important to consider how the kitchen is used to determine which option is best suited to your lifestyle requirements.

Think about how the kitchen is used and what elements of a sink would make tasks easier, for example; what typically needs to fit in the main bowl? Is a larger main bowl size needed? Would the addition of a half bowl be beneficial?

Is a drainer required?

EXAMPLES ARE AS FOLLOWS;

Single Half Bowl

Single Bowl

1.5 Bowl

Double Bowl

Large & Extra Large Bowl options

abode

The overall style of the kitchen will go a way to dictate the perfect sink and tap pairing. Bring colour into the kitchen with a granite sink and either a perfectly matched or contrasting tap pairing.

For example; an industrial style kitchen with dark colourways looks great with a stainless steel or granite sink plus a perfectly matched tap in stainless steel, black, or graphite. However, consider the finer details such as the handles or any key detailing on appliances/ accessories in the kitchen when selecting the perfect tap finish, it may be that a brass or copper tone is more suited to complement the kitchen overall.

LOOK OUT FOR THE FOLLOWING FEATURES ON SELECTED SINK RANGES

OVERFLOW

This removable overflow cover has the following benefits;

Removable for improved sink hygiene (easy clean)

> Provides a sleek, premium finish

Constructed from solid stainless steel

ORBIT WASTE

Provides a minimalist look, whilst removing unsightly debris from view

Constructed from stainless steel and rubberised plastic

Dishwasher safe, as well as being easy to empty

OVERFLOW

Allows for maximum bowl filling

Dispose of drinks even when the bowl is full

Applies to Londa and Neron ranges only

Look out for the following symbols throughout this section:

REVERSIBLE Overflow or drainer can be positioned either left or right.

2ND TAP HOLE FOR SWICH

STAINLESS STEEL UNDERMOUNTS

Understated simplicity

It's not just the material that's versatile but the range of products in this offer.

We're confident you'll find the perfect solution from our stainless steel undermount collection. Whether you're looking for a small single bowl, one and a half bowl, large bowl or even an extra large bowl!

We also have ranges which allow you to create the undermount look without the expense of solid surface. Take a look at our R15 range which can be either undermounted or inset so worktop material doesn't restrict you from creating the look you desire.

MATRIX RO

MATRIX R15

The R15 range is the most versatile undermount stainless steel sink in our offer. Not only can the products in this collection be installed either undermounted or inset, but there are six different bowl sizes available. The way we each use our kitchen differs, perhaps you are a keen cook or entertain often? If so, you would benefit from an extra-large bowl in which you can fit large pans, trays or barbecue racks that won't fit in the dishwasher.

CERAMIC UNDERMOUNTS

Ceramic sinks are often perceived purely as a traditional option for a traditional setting, however this range of products is extremely adaptable. Try pairing with a contemporary tap in the finish of the moment for a striking effect.

BELFAST

A true classic! The Belfast sink is a staple when it comes to a traditional kitchen, not only does it sit beautifully in any kitchen setting, but it has a large bowl capacity making it perfect for the busy household or keen cook. Try mixing this classic sink with a contemporary tap to inject a modern twist, suitably paired with the other finer details of your kitchen design.

GRANITE INSETS

Our range of inset granite sinks are truly distinctive. There are models with curvaceous contours and drainers with real design flair. These sinks don't only have big personality, they have true functionality. With 5 colours available across the range and all models constructed from our SiOForm® material, these sinks are as durable as they are striking.

ASPEKT

The curvaceous contours of the Aspekt make this sink a truly showstopping piece in any kitchen. The way the drainer flows down into the main bowl is a thing of elegance, all contrasted with square edges for a sharp and striking finish.

Orbit wastes with easy empty fold-back basket and pipework supplied

DUNE

The Dune collection takes its name from the drainer design, mimicking the soft peaks formed across sand dunes.

Dune takes a truly natural and organic form with its rounded corners which follow through into the bowl styling. Everything combined results in a stunning yet practical range.

Sinkaccessories

A RANGE OF
PRACTICAL
& STYLISH
ACCESSORIES ARE
AVAILABLE FOR
SINKS ACROSS THE
ABODE RANGE.

GLASS CHOPPING BOARDS

Add coordinated functionality to your kitchen with a premium Abode glass chopping board.

With black glass options tailored to fit the Apex and Mikro stainless steel inset sinks and both black and white options tailored to fit the Aspekt and Zero inset granite ranges.

DRAINER RACKS

Robust functionality that delivers on style.

This Black & Blum product features contemporary styling. The wave of vertical prongs can hold delicate glasses, heavy pans and even baby bottles. Features a drainage tray which can either release or retain water. Can be folded down to a flat compact shape for easy storage.

COLANDERS

Make your sink even more functional by adding a stainless steel colander. These half bowl colanders are the perfect complement to several sink families, making tasks such as emptying large pans a breeze.

BOWL MATS

Rubber bowl mat to prevent impact in the sink bowl.

Temperature resistant up to 200 degrees.

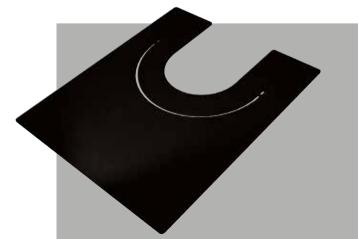

Design includes hard wearing surface texture and an anti-float feature.

DRAINER MATS

These versatile silicone rubber drainer mats are great for providing a versatile draining option in any environment, or for protecting stainless steel drainers. They are suitable for use with hot pans up to 230 degrees and are dishwasher friendly.

For further details on sink accessory pairings see page 104.

Style and finishes

A completely unique range of designs shaped by our UK design team. From contemporary single levers and functional steaming hot water taps to traditional monoblocs in a variety of finishes, we have an extensive range to ensure we have the perfect high quality design for every kitchen.

Design, quality and innovation are at the heart of what we do.

PRONTEAU. Steaming Hot Water Taps

Finding a tap that not only matches, but perfectly complements your kitchen and all of the accessories within it can be challenging. That's why we are constantly updating our portfolio, as well as adding new finishes to the mix to ensure the perfect finishing touch every time.

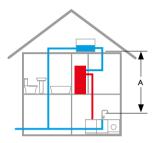

^{*} See Classically Abode brochure for the range

Tap performance

To ensure you achieve the best possible performance from your chosen tap, you need to be able to identify the existing plumbing system in place and therefore estimate the water pressure.

The following information provides a general overview on water pressure, however we do recommend that a plumber checks your water pressure with a pressure gauge.

Lower Pressure (gravity fed / vented system)

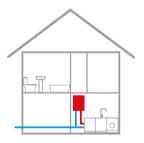

You have a cold water tank in the loft space and a hot water tank in the airing cupboard

You don't have an additional pump which is activated when you turn on any hot tap

The amount of hot water available to you is limited

With a gravity fed system you can approximate your hot water pressure by dividing the vertical distance (A) in metres by 10 (e.g. 3m = 0.3 Bar)

You should choose taps which are suitable for use with a lower pressure system

High Pressure (combi boiler)

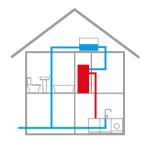

You have a boiler but no separate hot water storage cylinder

The boiler is typically found in the kitchen

Hot water is delivered instantly and on demand

This system is typically delivers the hot water between I and I.5 bar

You should be free to choose from most of our tap range

High Pressure (pumped gravity fed system)

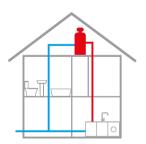

You have a cold water tank in the loft and a hot water cylinder in the airing cupboard

You have an additional pump (normally located near the hot water cylinder) which is automatically activated when you turn on any hot tap

The pressure is defined by the pump. See pump manufacturer's details.

You should be free to choose from most of our tap range

The amount of hot water available is limited

High Pressure (unventilated system)

Most commonly referred to as a "Megaflo" or similar brand

You have a hot water cylinder directly connected to the cold water supply. Above the cylinder could be an expansion vessel. (The hot water cylinder is typically in the loft space)

You do not have a cold water tank

The hot and cold water pressure is typically around 3 bar

The amount of hot water available is limited

You should be free to choose from any of our taps

WATER AERATION

All mixers use spout aerators or flow straighteners to add bubbles to the water. These innovations in fluid technology keep your water flow in a controlled and distinctive pattern and eliminates splash

VALVE CARTRIDGES

Abode use ceramic disc valves in all of our tap designs. These are tested for over 200,000 cycles before we will pass them for use within our taps. Why? Well this means that under normal use conditions your tap valves have proven that they will work for many years to come. The kitchen tap is the most used appliance in the kitchen, so valve quality assurance is essential.

TESTING

Abode products are designed specifically for the UK by our team of in-house designers. We use artisan hand polishing techniques, sophisticated plating and powder coating processes to ensure a blemish free surface, along with robotic production of parts for precision. Every Abode product is 100% end of line tested before it leaves the factory, giving you absolute peace of mind.

LUXURY PACKAGING

After taking all this care with the product, we want to ensure they reach you in perfect condition with all the parts that you will need for a seamless and straightforward installation. Fixing kits and tail pipes (with non return valves where necessary) are provided. If the tap is heavy or tall, we also provide you with a tap stabilisation bracket in the box. We try and think of everything so you don't have to.

Throughout this section you will see the following symbols next to products where relevant:

MINIMUM BAR PRESSURE

10mm FAST FIT TAILS *

12mm FAST FIT TAILS #

IET SPRAY / **REVOLVE**

* Flexible Tail Pipes are supplied with the majority of Abode taps. We therefore recommend Fast Fit Tail Pipes where supplied copper tail pipes can be upgraded. For accessories see page 247.

PRONTEAU.* STEAMING HOT WATER TAPS

Useful technology is fast becoming the norm in the modern kitchen, with hot water taps being firmly among their number. Many of us increasingly look for additional functionality from the kitchen tap as we would from an appliance. Steaming hot water taps fulfill a need and we'll put your mind at ease about any safety concerns across the following pages, a steaming hot water tap is safer than a kettle in many ways.

Why should I choose a PRONTEAU.

Steaming Hot Water Tap?

I/ SAVE TIME

Adding a Pronteau to the kitchen is guaranteed to make a difference and leave customers thinking how they got by without a steaming hot water tap.

Some of the benefits to note are;

- Instant hot drinks
- Speed up cooking tasks such as pan filling for vegetables, pasta or rice cooking
- Instant porridge or noodles
- Speeding up cleaning tasks such as pan and dish rinsing

By switching to filtered water from the tap in comparison to buying bottled mineral water you will save money as well as aiding the reduction of plastic waste.

Our 4 IN I ranges have it all, domestic hot & cold water, filtered steaming hot water and filtered cold water.

3/ STREAMLINE THE KITCHEN

Free up worktop and fridge space of kettles and filter jugs for clutter-free worktops and that extra fridge space that we often find ourselves needing.

4/ REDUCE WATER WASTAGE

As there is no need to fill the kettle every time a hot drink is made or a pan is to be filled, you will find that water and energy wastage in the household is reduced.

6/ NEVER WORRY ABOUT SAFETY

Our products have been designed with safety inmind. The 4 IN I uses a patented HotKey® to dispense the steaming hot water. This can be stored out of reach of children when not in use. The 3 IN I collection have a two-stage handle to dispense the steaming hot water, push the handle down and pull forward to safely dispense the water.

5/ IMPROVE THE TASTE OF HOT DRINKS WHILST PROTECTING YOUR BOILER

All Pronteau products are supplied with a filter. This filter has an important role as it maintains the long-term health of your boiler, preventing excessive limescale build up.

Secondly, achieve great tasting hot drinks every time as the filter will improve the taste of your water and prevent the scum that you sometimes find on hot drinks.

7/ GET THE PERFECT HOT DRINK

With the 4 IN 1 range you can set the innovative ProBoil3 boiler to any temperature between 80 and 98°C allowing you to dispense water at the optimum temperature.

Check our handy table showing the perfect temperature for a range of hot drinks at **pronteau.co.uk**

FUNCTIONS

domestic cold, domestic hot and filtered steaming hot water

4 №1

domestic cold, domestic hot, filtered cold and filtered steaming hot water

Swan spout Ouad spout

STYLE

Available on all Pronteau models.

The 3 IN I range is available in 5 finishes across these two styles and the 4 IN I is available in two finishes.

3 Part

Traditional design with ceramic style handles

Both of the above are available in the 4 IN I range.

Professional style

Available in the 3 IN I range. The steaming hot water is dispensed from an outlet in the crossbar. Also features a pull around with spray function for the domestic hot and cold supply.

When we developed our innovative range of steaming hot water taps for launch in 2016 we took into consideration every aspect of safety, not only for the dispensing of the steaming hot water but also the maximum temperature requirements for the stored water in the boiler. This is the main reason our products store water to a maximum temperature of 98°C, this makes our product fully compliant with Part G(3) of the UK Building Regulations.

PRONTEAU.™ 3 № 1

3 IN I functionality delivering; domestic hot, domestic cold and steaming hot, filtered water

CONTEMPORARY TAPS

Contemporary taps can be defined by several characteristics; sleek lines, stark shapes, distinctive spout styling, the latest finishes and more. The carefully thought out selection of styles available across our range ensures there is a style to suit every environment.

Complement your kitchen design with the latest finishes to add a showstopping feature tap.

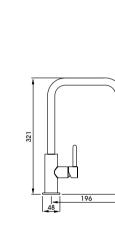

SINGLE LEVERS

With a variety of benefits, the single lever tap is a popular choice for many, so water wastage is minimised whilst the flow gets to the right temperature. The temperature is easy to adjust with a flick of the wrist and several sleek and streamlined designs, including top lever styles are available.

Althia Single Lever

The tall body and spout paired with the distinctive design of Verla make it a real focal point in the kitchen

Soft handle styling with hot and cold indicators on the handle ends

Full specification documents can be found at www.abode.eu

PULL OUT & PROFESSIONAL TAPS

If you have the water pressure capability, a pull-out tap should not be overlooked. The cost may be slightly more up-front than a standard tap but the benefits over time will more than justify this.

The addition of a pull-out tap to the kitchen will make daily tasks such as pan filling, dish rinsing, food preparation and sink bowl cleaning that much simpler. Ideal for the keen cook or busy family household.

The range consists of two different types of pull out tap; a true pull out and a pull around tap. On a true pull, the hose is discreetly hidden inside the tap and allows the user to pull the hose out to its full set length. A pull around tends to be a professional style tap in which the hose is visible on the external of the tap and held in a handspray holder located on the end of the extension bar.

In this range you'll find some products with an additional spray function which is operated by pressing a button on the end of the spout. This button simply changes the flow of the water from the standard to a powerful spray.

Our range of professional taps offer the manoeuvrability and features detailed above whilst being a statement piece in the kitchen.

See our stainless steel range for pull out and professional taps constructed from solid stainless steel.

Althia Single Lever Pull Out

Chrome £266

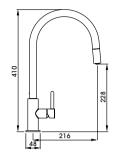

AT1261

Brushed Nickel £296

The discreet pull out allows for a minimal design that maximises on both performance and style

The tall swan neck spout of the Althia pull out provides optimum flexibility, allowing you to reach into the corners of even the largest of sinks

Pull out formed from a grey Nylon hose. Set the pullout length you require using the counterbalance weight under the sink

Hesta Monobloc Pull Out

STAINLESS STEEL TAPS

Stainless steel as a material has several well loved benefits including:

It is a closer match to stainless steel sinks and appliances

The material itself is 100% recyclable

Stainless steel taps have no coating, they are just polished and brushed

It is more durable and less likely to scratch, small scratches can be brushed out

Stainless steel is a naturally hygienic material

Pot filler style functionality in a simple to fit deck mounted format

Easily reach each corner of the sink or fill large pans from the worktop rather than in the bowl due to multiple swiveling spout joints

Solid 304 stainless steel construction

Unique, innovative and practical design

Delivers hot, cold & mixed temperature water

The Axial can be deck or sink mounted

Full specification documents can be found at **www.abode.eu**

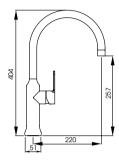

Mimasa Pull Out with spray

AQUIFIER[™] WATER FILTER TAPS

The Abode Aquifier range features popular designs from our tap range as well as exclusive designs with the added benefit of a dedicated filtered water function – straight from the tap.

abode

WHAT
ARE THE
BENEFITS
OF A WATER
FILTER TAP?

WATER QUALITY: An Aquifier tap or Swich device filters particulates from water, reduces the taste and odour of chlorine and reduces hardness from the water.

HEALTH: Having filtered cold water on tap will hopefully encourage the consumption of more water. Fill a reusable water bottle each day directly from the tap.

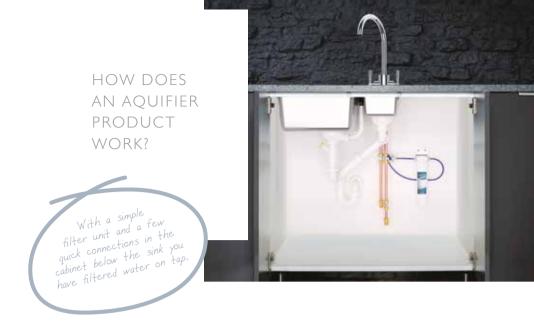

ENVIRONMENT: By removing the need for bottled mineral water, every home with an Aquifier product is doing their bit for the environment by reducing single use plastic consumption.

COST: If bottled mineral water is a frequent purchase in your household you can save considerable amounts each year by switching to an Aquifier or Swich product.

SPACE SAVING: If you previously had a water filtration jug or bought bottled water, just think how much space you can free up in the fridge.

APPLIANCE HEALTH: If you live in an area with particularly hard water you will notice that the kettle suffers as a result of the limescale build up over time. Fill your kettle with filtered water and prolong its life.

Find out more on the website: https://www.abodedesigns.co.uk/faqs/aquifier

WHY IS IT IMPORTANT TO KEEP UP WITH REPLACEMENT FILTERS?

It is simple to maintain your filter, it sits in a bracket either at the back or on the side of the inside of the base cabinet below the sink. It is easy for anyone to replace using our simple, fast and secure 'SafeLock' system.

We offer a dedicated filter reminder service – we'll send you a reminder by email or post each time your filter is due for renewal.

Filters are easy to buy as singles or packs from **www.abode-shop.co.uk** when the time comes to replace.

It's important to change the filter at the recommended intervals to ensure the consistency of the supply of fresh, filtered drinking water. **USAGE:** The capacity of the filter units for Aquifier and Swich products vary, these range between 1000L and 6000L (dependent on incoming water quality and usage).

We have both Classic and High Resin filters available, specifically tailored for use in soft water or hard water areas respectively.

If you live in a soft water area the filter will be used up much slower than one in a hard water area (based on a standard average usage).

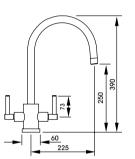

We recommend that our filters are changed every 6 months on average. If you live in a hard water area or have a higher filtered water consumption, replacements every 3 months may be beneficial.

Atlas Aquifier

AT2003 Chrome £416

Maintain the sleek and popular style of the Atlas tap with the addition of filtered cold water

Cold, hot and pure indicators on the top of the handles

WARRANTY

COMPREHENSIVE 5 YEAR WARRANTY

In the unlikely event that you should experience any defect in the materials or workmanship of your new

- Abode sink within 10 years of purchase
- Abode tap within 5 years of purchase
- ProBoil boiler within 2 years of purchase

The purchaser's sole remedy shall be the replacement (at the manufacturer's discretion) of all or any part of the product that is defective.

For the tap, all working parts and valves are guaranteed for a period of 5 years from date of purchase. Decorative surface finishes and O-rings are guaranteed for I year from the date of purchase provided that our advice concerning care has been observed and no scouring agents have been used.

This is provided that the sink, mixer or tap has been used for normal domestic purposes and that the care, installation and maintenance instructions have been observed. The warranty extends to the original purchaser only.

CUSTOMER CARE

CAUTION

Repeated release of boiling hot water directly into coloured sinks can in extreme cases cause crazing and even cracking. Therefore we recommend great care is taken not to release the water directly on to the sink surface at full temperature for extended periods.

WATER REGULATIONS

All products are designed in accordance with European Water Regulations and are manufactured to WRAS or other applicable European standards. All products should be installed in accordance with Local Water Bye Laws.

Visit www.abode.eu to search all products with a current WRAS approval.

TECHNICAL SUPPORT

Choosing the right mixer tap and sink for your home is an important choice as the tap is not only the most architectural item in your kitchen, but also the most used.

Think about the style you require, the ease of use you are looking for, and then consider your existing water supply and the water pressure available to you. If you have any questions with regards to whether a tap will be suitable for your application, please contact our technical support team or visit our website www.abode.eu for more details.

For sinks, consider the material and colour you prefer, the uses of the sink, the number and bowl sizes, the type of worktop material you propose to use and the base unit space available to install within.

Your long-term satisfaction with the product is important to us. In the event that you require spare parts for your Abode product, please contact our technical support team or visit our web site for further technical information.

Our ProBoil boilers store water at a maximum temperature of 98°C to conform to UK legislative limits. Spout exit temperatures will vary according to environmental changes and usage patterns.

THE SMALL PRINT

Abode is a division of Norcros Group (Holdings) Limited.

Abode, Distinctly, Aguifier and Pronteau are registered trademarks of Abode.

Errors and omissions excepted.

Our policy is to continually improve and develop our products, and accordingly we reserve the right to amend specifications, particulars of weights, measures, prices, dimensions, finish and colour availability without prior notice.

All prices include VAT at 20% and are the Manufacturers' recommended prices only.
